How the Project Came About

- *String Art* book in a book preview box

5

TOOLS OF THE TRADE

6

The Story

- Students selected (somewhat at random) a constellation.
- They were taken to the library where they used books and online resources to research the story/myth behind their constellation.
- Students were then tasked with taking their myth and converting it into an "elevator pitch" in order to share it with others.

7

The Art

Supplies

- [Cork Board](#)
- [Black acrylic paint](#)
- [Push pins](#)
- [String](#)
- [Glitter](#)
- [Glue](#)
- [Foam sheet](#)

8

The Art

- Depending on the size of the constellation each student received at least one 5" x 5" cork board.
- The cork board was painted black with acrylic paint and left to dry.
- Adhere a foam sheet to the back of the cork board.
- Set the black push pins in place.
- Strung the constellation with regular twine.
- Glued the tops of the push pins and dipped them in silver glitter.

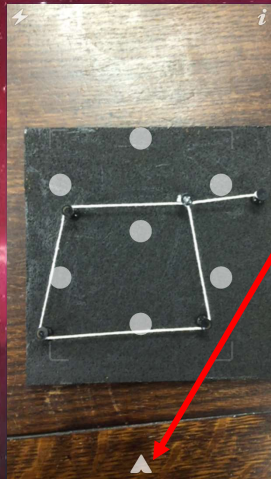

The App – HP Reveal

- Using an Apple device, students were recorded telling their story.
- Reveal limits you to roughly 20-25 seconds or the files are too large.
- Reveal requires a unique trigger to work so don't duplicate topics if at all possible.
- Reveal was formerly known as Aurasma and the fit and feel are still very similar.

11

Using HP Reveal

- Tap Here to get to the home screen and main menu.

12

Using HP Reveal

- Click on the plus symbol to begin a new "aura" as they call it.

13

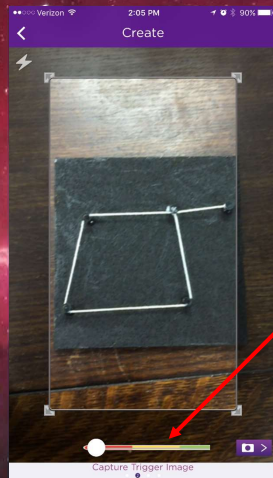

Using HP Reveal

- On this screen, choose your overlay.
- This is the clip that will play whenever you place your device over the trigger image.
- Use these buttons to select overlays you've created (device) or existing ones in the app (Library)

14

Using HP Reveal

- After choosing your overlay, you'll need to set the trigger image that causes it to play.
- This slider makes sure that your image is unique enough to serve as a trigger. Red, too plain; green, just right

15

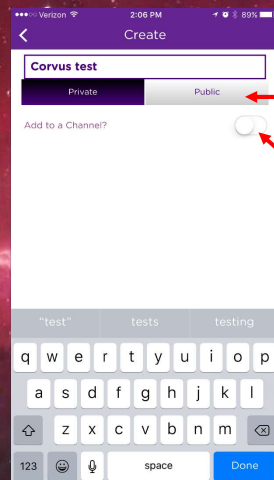

Using HP Reveal

- You can use this screen to set the size and position of your overlay. For my purposes, I put everyone down in the lower right quadrant. You can feel free to set this to your own needs.
- After a quick preview, you're ready to save and go on to the next.

16

Using HP Reveal

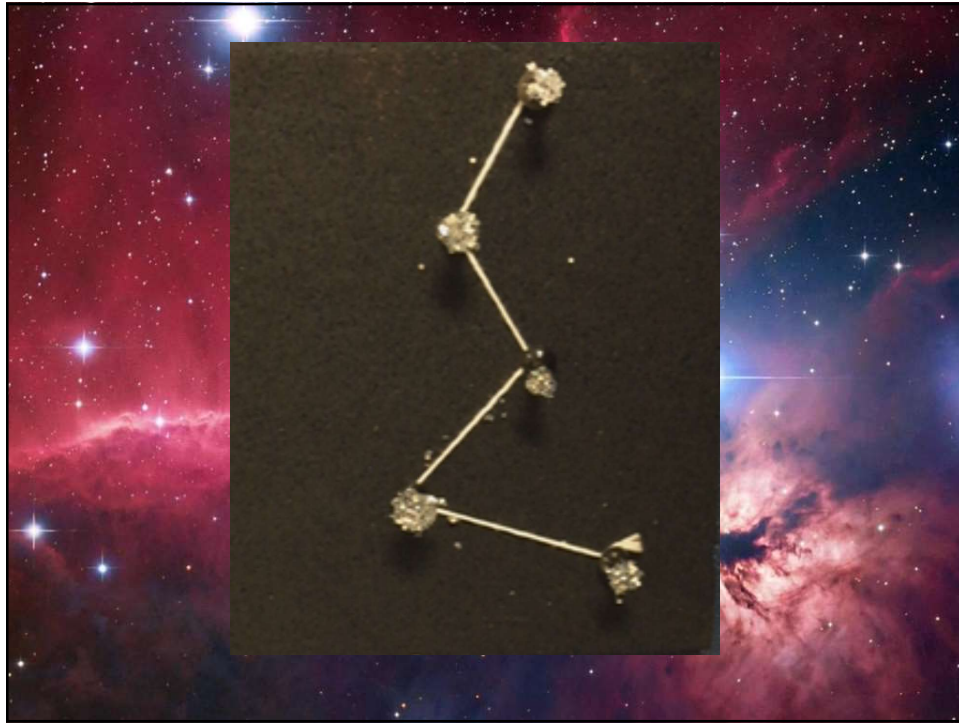

- Create a name for each of your entries.
- If you want others to view them on their own device, they'll need to be set as public.
- It's also helpful to add them to your personal channel as well.
- Outside users will also need to subscribe to your unique channel in order to view them.
